

Adversary TTP Emulation

Purple Team

WHAT IS AN ADVERSARY TTP EMULATION?

We emulate selected Tactics, Techniques, and Procedures (TTPs) you are concerned that a determined, sophisticated, and patient APT (Advanced Persistent Threat) would use to attack your security infrastructure.

DEVELOP THREAT PROFILE

We will work with your security team to identify TTPs you'd like to focus on. You have flexibility to focus assessment on specific areas of your security infrastructure.

EMULATION PLANNING

We use the Threat Profile TTPs to create emulation plan to set the rules of engagement and targeted execution of TTPs to measure current detection and response capabilities.

OUR TACTICS

'Live fire' collaboration

We conduct the assessment using both Defender and Attacker postures to provide your team with a hands-on, real-time training and experience.

Controlled

Our emulation is executed on a specific system(s) in a controlled manner.

Dynamic

We adjust our tactics throughout the exercise allowing your team to modify its defense in real-time.

BENEFITS

01. Prioritized Awareness

Our assessments allow your team to develop and/or refine its defenses to meet the prioritized threats.

02. Not a Static Result

Our tactics allow your team to better learn, understand, and detect an 'attack lifecycle'.

03. High-Touch, Real Time Training

Working with your team during the assessment provides an immediate benefit for your security.
